GNU nano 8.7.1

```c
#include <stdio.h>
#include <stdlib.h>
#include <unistd.h>
#include <sys/wait.h>

int main()
{
    pid_t p = fork();

    if (p < 0)
    {
        printf("Fork failed!\n");
        return 1;
    }

    if (p == 0)
    {
        printf("Child PID: %d\n", getpid());
        sleep(2);
        printf("Child terminated.\n");
        exit(0);
    }
    else
    {
        printf("Parent waiting for child...\n");

        pid_t pid = wait(NULL);

        printf("Child PID %d terminated.\n", pid);
    }

    return 0;
}
```

vboxuser@VM-1:

```
vboxuser@VM-1:~$ nano process_creation_wait.c
vboxuser@VM-1:~$ gcc process_creation_wait.c -o exp10
./exp10
Parent waiting for child...
Child PID: 6928
Child terminated.
Child PID 6928 terminated.
